Aland is a sort of bridge between Finland and Sweden. Although it looks small and insignificant on the map, its area is about 10.000 sq.km, of which 1450 sq.km is land. There are more than 6500 islands and rocks rising from the Baltic. The population is around 22.000.

The facinating scenery of these islands has made this archipelago an appreciated resort for tourists from all parts of the world. Luxurious ferries bring people to the island from Finland and Sweden.

This operation was made from Brändö, the easternmost island of Aland. The OH-DX Group's contest site with the 100 ft rotatable tower was established on the same location in September 1980.
